

Notes for scanned version of Dissertation:

This document was scanned with ReadIris 9, a european program designed to convert scanned images into digitized text (OCR).

This program does a much better job than it's major competition in that it accepts Hawaiian words as text.

However, as you can see it does have significant problems with formatting and structure, which I did not have the time to correct.

It also was accurate on recognizing letters/characters about 95% of the time, which is quite good by OCR standards. I have gone through and 'proofed' the text as much as possible but there are likely still a number of mistakes in the text.

I apologize in advance for these errors, whether by my original omission or by the invisible digital partner.
